

CURRICULUM

The Global Logistics Technology curriculum prepares individuals for a multitude of career opportunities in distribution, transportation and manufacturing organizations. Classroom instruction, field of study experiences and practical laboratory applications of logistics management and global technology capabilities are included in the program of study.

Course work includes computer applications, accounting, business law, economics, management, industrial sciences, and international studies. Students will solve different levels of logistics-related problems through case study evaluations and supply chain projects utilizing logistical hardware and intelligent software tools.

ABOUT THE PROGRAM

Logistics is a term used widely in industry to describe all of the elements that come into play as

products and materials are distributed around the globe, such as procurement, transportation, warehousing, and inventory control that together constitute supply management. Typically, logistics personnel rely

on high-tech information systems to handle orders and monitor items as they move through a chain that might stretch thousands of miles.

The Global Logistics curriculum will integrate written course materials, internet-based instruction and laboratory simulation. It will teach participants the advanced technical skills needed to ship, track and receive goods around the world. "This program will serve both entry-level students to the logistics field, and also people currently employed in the field who need to upgrade their skills or gain new skills," said Bobby Van Brunt, VGCC's Dean of Business and Applied Technologies.

JOB OUTLOOK

Graduates should qualify for positions in a wide range of government agencies, manufacturing and service organizations. Employment opportunities include entry-level purchasing, material management, warehousing, inventory, transportation coordinators, and logistics analysts.

Upon completion, graduates may be eligible for certification credentials through APICS (The Association for Operations Management) and AST&L (The American Society of Transportation & Logistics).

ADMISSION REQUIREMENTS

Generally, a high school diploma or its equivalency is required for technical programs at VGCC. VGCC provides an excellent program for completing studies for a high school diploma or equivalency diploma (GED).
