Vance-Granville Community College
Radiography Program
Program Effectiveness Data

The performance of the radiography program is reflected through program effectiveness data as defined by the Joint Review Committee on Education in Radiologic Technology (JRCERT) www.jrcert.org. Program effectiveness data includes the program completion rate, credentialing examination pass rate and the job placement rate for the program. Explanation of these measures and program data that correspond with the annual report most recently submitted to the JRCERT are noted below. This information can also be obtained at www.jrcert.org/resources/program-effectiveness-data. Questions about the program effectiveness data should be directed to the Program Head of Radiography.

The radiography program’s 2014 annual report to the JRCERT reflected the following:

**Completion Rate – January 1, 2014 through December 31, 2014**

This is an annual measurement of the number of students that began the program divided by the number of students that actually completed the program. The program’s completion rate for 2013 was 83.8%. Twenty-five (25) of thirty-one (31) students expected to complete the program in 2013 went on to complete the radiography program in that year.

**Credentialing Examination Pass Rate – 2009 through 2013**

This is the number of students that pass the American Registry of Radiologic Technologists (ARRT) certification examination on the first attempt within six months of graduation from the program. The figure reflects an average over a five-year span. The program’s credentialing examination pass rate stated as an average from the years 2009 through 2013 is 96%. One hundred and thirteen (113) of the one hundred and eighteen (118) graduates of this program taking the ARRT certification examination within six months of graduation passed on the first attempt.

**Job Placement Rate – 2009 – 2013**

This is the number of students that gain employment in the radiologic sciences within six months of graduation versus the number that graduate and are actively seeking employment. The figure reflects an average over a five-year span. The radiography program’s job placement rate as an average from the year 2009 through 2013 is 88.46%. Twenty-seven of the twenty-nine students actively seeking employment indicated that they had obtained employment in the radiologic sciences within six months of graduation. This information was gathered from returned graduate surveys over the time period specified. A majority of the students graduating during this period had chosen to continue their education.
